Wheeler Dealers – Vehicle Inspection Marketplace

1. Objective

Build a **Vehicle Inspection Marketplace** within The Wheeler Dealers platform.

Customers should be able to book a vehicle inspection online. The inspection request will then be sent to registered third-party inspection companies. An available inspection company accepts the job, performs the inspection, and submits the completed inspection report through the platform.

The Wheeler Dealers will act as the **marketplace and booking platform** rather than employing its own inspectors.

---

2. Main User Types

The system will have three main users:

Customer

The person requesting and paying for the vehicle inspection.

Inspection Company

Third-party inspection companies registered with The Wheeler Dealers to receive and complete inspection jobs.

Admin

The Wheeler Dealers team managing customers, inspection companies, jobs, payments and reports.

---

3. Customer Booking Process

Customer visits:

TheWheelerDealers.com → Inspection

Customer enters:

- Vehicle make
- Vehicle model
- Model year
- Vehicle location
- Preferred inspection date/time

- Customer name
- Mobile number
- Email
- Additional comments if required

The system displays the **fixed inspection price**.

Customer confirms the booking and makes payment online.

After successful payment, an **Inspection Job** is automatically created.

---

4. Inspection Job Marketplace

Once a job is created, it should become available to approved inspection companies.

Example:

New Inspection Available

Vehicle: Toyota RAV4 2019
Location: Dubai Marina
Date: 15 August
Time: 3:00 PM

[ACCEPT JOB]

Approved inspection companies should receive a notification when a new job becomes available.

The first eligible company that accepts the job receives the assignment.

Once accepted, the job should no longer be available for other companies to accept.

---

5. Inspection Company Dashboard

Each registered inspection company should have its own login/dashboard.

Dashboard sections:

Available Jobs
Shows inspection requests currently available.

Accepted Jobs
Shows jobs accepted by the company.

Completed Jobs
Shows previously completed inspections.

Payments
Shows earnings/payment status for completed jobs.

For each accepted inspection, the company should be able to see the necessary customer/vehicle/location information.

---

6. Completing the Inspection

After physically inspecting the vehicle, the inspection company should open the job and submit the inspection information.

The system should allow:

- Inspection checklist completion
- Inspector comments
- Vehicle photos
- VIN/chassis number
- Odometer reading
- Exterior condition
- Interior condition
- Engine condition
- Mechanical observations
- Tire condition
- Diagnostic/OBD information where available
- Accident/paint observations
- Overall vehicle condition

The company then selects:

[SUBMIT INSPECTION]

---

7. Wheeler Dealers Inspection Report

The customer should **not simply receive the inspection company's original report**.

The submitted inspection information should be converted into a standardized:

THE WHEELER DEALERS

VEHICLE INSPECTION REPORT

The report should use Wheeler Dealers branding and a consistent format regardless of which inspection company completed the physical inspection.

The system should generate the final report automatically as a PDF.

---

8. Customer Delivery

Once the report is approved/finalized:

Customer receives a notification by:

- Email
- WhatsApp/SMS where integrated

Example:

Your vehicle inspection has been completed.

[VIEW REPORT]

[DOWNLOAD PDF]

The customer should also be able to access previous inspection reports from their account.

---

9. Admin Dashboard

Admin should be able to manage:

Inspection Jobs

View all pending, available, accepted and completed jobs.

Inspection Companies

Add, approve, suspend or remove inspection partners.

Customers

View customer details and booking history.

Reports

View submitted inspection information and final reports.

Pricing

Set the customer inspection price.

Partner Payments

Set the amount payable to the inspection company.

Commission

Track the difference between the customer price and partner payment.

Example:

Customer pays: **AED 299**

Inspection partner receives: **AED 200**

Wheeler Dealers marketplace revenue: **AED 99**

These amounts should be configurable by Admin.

---

10. Inspection Company Registration

Inspection companies should be able to apply to join the marketplace.

Information required:

- Company name
- Trade license details
- Contact person
- Mobile number
- Email
- Areas/cities covered
- Inspection services offered
- Bank/payment information

Registration should require **Admin approval** before the company can receive inspection jobs.

---

11. Job Status

Every inspection should have a clear system status:

Payment Pending → Available → Accepted → Inspection in Progress → Report Submitted → Completed

Admin should be able to manually change a status when necessary.

---

12. Notifications

The system should support notifications for important events.

Inspection Companies

New inspection available.

Customer

Booking confirmed.

Inspector/inspection company assigned.

Inspection completed.

Report available.

Admin

New booking.

Job accepted.

Inspection submitted.

Job completed.

---

13. Important Development Requirement

The marketplace should be designed so additional inspection companies can be added without changing the system.

The Wheeler Dealers should control:

Customer → Booking → Payment → Job Distribution → Inspection Data → Standardized Report → Customer Delivery

The third-party inspection company is responsible mainly for:

Accept Job → Perform Physical Inspection → Submit Inspection Data

This structure allows The Wheeler Dealers to scale inspection coverage across the UAE without maintaining its own large team of inspectors.
